

Secure-Rite Mobile Storage - Securely Locking Your Container

To optimise the security of your container Secure-Rite Mobile Storage strongly recommends that you place an appropriate high security lock within the Lock Box provided (Example A). Lock shackles that hang exposed below the lock box (Example B), or locks fitted only to the container handles (Example C) potentially can compromise security and may place your valuables at risk.

Example A: Lock in Lock Box

Example B: Shackle Exposed

Example C: Lock on Handle

To achieve this we have found what we believe are the best locks for shipping containers. These locks are the cheapest insurance you are ever going to buy!

Maximum Security Lock: *Abus Monoblock 92*

- Strong ABUS padlocks made from hardened steel for high-security requirements and to secure your most valuable item
